ORAL ANTIBIOTIC PASTE FOR HORSES

WHAT IS ILIUM SULPRIM ORAL ANTIBIOTIC PASTE FOR HORSES?

- Indications:** For the treatment of infections in horses due to organisms susceptible to the combination of sulfadimidine and trimethoprim.
- Active Ingredients:** 315 mg/g sulfadimidine, 63 mg/g trimethoprim
- Schedule:** S4
- Physical Description:** Light brown to brown paste with a sweet caramel odour.

WHY CHOOSE ILIUM SULPRIM ORAL ANTIBIOTIC PASTE FOR HORSES?

- ✓ Synergistic, bactericidal combination of sulfadimidine and trimethoprim.
- ✓ Available in a 250 g tube and a Twin Pack (2 × 250 g tubes).
- ✓ Designed for use with a standard 50 mL catheter-tip syringe.
- ✓ Convenient room-temperature storage below 30°C.
- ✓ Australian-made and Australian-owned.
- ✓ Available from your preferred veterinary wholesaler.

HOW TO USE ILIUM SULPRIM ORAL ANTIBIOTIC PASTE FOR HORSES?

For oral use only.

Dose Rate: Administer 4 mL/50 kg body weight twice daily for up to seven days or as directed by a veterinarian. Draw the required amount into a standard 50 mL catheter-tip syringe and administer by placing the nozzle into the side of the mouth and depositing the paste as far back over the tongue as possible.

Practical Dosing Guide: A 250 g tube is equivalent to approximately 220 mL of paste. For a 500 kg horse receiving 40 mL twice daily, one tube provides five complete doses and the Twin Pack provides ten complete doses – equivalent to five days of treatment.

Administration Route: Oral.

Contraindications: Do not use in horses with hepatic parenchymal damage, blood dyscrasia, renal disease or urolithiasis, or in animals with a history of sulfonamide or trimethoprim sensitivity.

In cases where the infection is non-responsive or chronic, culture and sensitivity tests should be undertaken.

Withholding Period: MEAT (Horses): 28 days.

Storage Conditions: Store below 30 °C (room temperature). Protect from light.
